Discussion of common inspection findings

The ISG maintains a database of inspection findings for its members to share knowledge and to identify any recurring findings from inspections that warrant further discussion with the firms and/or standards setters. Based on analysis of the database entries, the ISG members discussed the nature of findings related to the auditors’ responses to assessed risks (ISA330) as well as potential causal factors for these findings. An Infographic on that topic including key findings and messages is attached to this press release and will be available on the CEAOB’s website.

Presentation of inspection approach

The ISG continued a series of presentations by members of their inspection approach. The ICAC presented details of the inspection approach adopted in Spain.

Other areas covered during the meeting

ISG members shared their experience on a number of other topics, including an update on a survey on materiality performed at CEAOB level, cooperation with third country audit regulators, consequences for the main audit networks of the events in Ukraine, inspections in a post-pandemic world, and the last updates on the Corporate Sustainability Reporting Directive.
